DETAILED ACTION

1. In response to the Office action mailed on May 5, 2008 the Amendment has been received on November 5, 2008.

Claims 26-31 have been amended.

Claims 17-31 are currently pending in this application.

Allowable Subject Matter

2. Claims 17-31 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claim 17 is allowed because prior art fails to teach or make obvious an imaging apparatus comprising: an adjustable collimator arranged to vary a width of an imaging beam in a scanning direction; and a control system responsive to adjustment of the collimator to combine the output signals of groups of pixels comprising greater numbers of pixels automatically as the collimator is adjusted to increase the width of the imaging beam in the scanning direction, thereby to increase the contrast resolution of the image signals for a given spatial resolution as claimed in combinations with all of the remaining limitations of the claim.

Claim 21 is allowed because prior art fails to teach or make obvious a method of operating imaging apparatus of the kind having a radiation source and an associated detector which are moveable relative to a subject, the method comprising: adjusting a

Art Unit: 2882

collimator to vary a width of the imaging beam in a scanning direction; detecting the setting of the collimator; and combining the output signals of groups of two or more pixels according to the setting of the collimator, thereby to optimize a selected characteristic of the image signals as claimed in combinations with all of the remaining limitations of the claim.

Claim 26 is allowed because prior art fails to teach or make obvious a collimator for adjusting the effective width of an imaging beam generated by a radiation source, the collimator comprising: first and second shutter elements arranged side by side and including respective first and second tapered surfaces, and further including respective first and second slit-forming surfaces forming there between a slit, the slit having a length and a width of shorter dimension than the length, the width defined by a distance between the slit-forming surfaces; a drive mechanism arranged to produce first sliding movement between the first tapered surface of the first shutter element and the first tapered surface of the guide mechanism, and second sliding movement between the second tapered surface of the second shutter element and the second tapered surface of the guide mechanism, to cause the first and second slit-forming surfaces to move relative to one another in the direction of the slit's width to vary the dimension of that width as claimed in combinations with all of the remaining limitations of the claim.

Claims 18-20, 22-25 and 27-31 are allowed by virtue of their dependence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2882

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Response to Arguments

4. Applicant's arguments, see pages 8-10, filed November 5, 2008, with respect to claims 17-31 have been fully considered and are persuasive. The rejection of claims 26-31 has been withdrawn. Claims 17-25 are remaining allowable as indicated in the previous Office action.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Scheid (US Patent 5,164,976), Murthy et al. (US Patent 6,055,295), Polkus et al. (US Patent 6,478,462 B2) and Thunberg (US Patent 6,106,152) teaches the adjustable collimators in the X-ray imaging apparatus.
